Education

Nigerian University of Technology and Management (NUTM)

2024 – In Progress

BSc in Cybersecurity Science

Projects

Koji | *In Development*

React Native | Expo | TypeScript | Supabase | OpenRouter

- Building a **cross-platform mobile app** in React Native and Expo: onboarding flow, navigation architecture using Expo Router, AI chat interface routing across multiple foundation models through OpenRouter, and task and note management features — all built and maintained solo.
- Implemented **Supabase authentication** (email, Google, GitHub OAuth) with per-user data isolation enforced via Row Level Security policies at the database level.
- Designed a **mobile-first UI system**: dark mode design, warm typography, component architecture, and smooth screen transitions optimised for mobile interaction patterns.
- Used **Claude Code, Claude Opus, and GitHub Copilot** throughout the build to accelerate development while retaining full architectural ownership.

What's Next | *Live*

React | TypeScript | Django | PostgreSQL | Gemini API

- Built a **full-stack SaaS platform** from zero as sole engineer: React and TypeScript frontend, Django REST backend, PostgreSQL database, and multi-API orchestration across three external services.
- Integrated the **Gemini API** as the core product feature: prompt engineering, structured output validation, fallback model routing, and rate limit handling to keep AI responses reliable in production.
- Built user **authentication and session management**, data persistence, and role-based content access across the full stack.

AP Calculus BC Course Website | *Client Project* WordPress | PHP | MemberPress | Stripe

- Built a complete **booking and payment platform** for an online course business: client enrolment flow, **Stripe payment integration**, individual student accounts, and a password-protected member area.
- Implemented **automated email notifications** for payments, account creation, and password resets via Google SMTP relay.
- Configured **admin dashboards** for managing bookings, processing refunds, creating discount codes, and handling manual enrolments without developer involvement.

Sidedish Foods | *Live*

JavaScript | Node.js | PostgreSQL

- Built a **full ordering platform** from scratch: customer-facing booking workflow, cart and checkout flow, REST API backend, and an internal analytics dashboard for business performance tracking.
- Maintained and expanded post-launch as an ongoing client engagement.

Klo's House of Fashion | *Live*

React | Next.js | TypeScript | TailwindCSS

- Built a **mobile-first e-commerce platform** with product browsing, a TypeScript component library, and REST API integration; actively maintained post-launch.

Work Experience

Hashebi Construction

Jan 2026 – Feb 2026

Contract Developer

Remote

- Delivered a production web application end-to-end in Next.js and TypeScript: architecture, development, testing, and deployment independently within a short contract window.

Susan Gilleran / Calculus Learning Center

2026

Contract Developer

Remote

- Built and delivered a complete booking and payment platform with client intake, Stripe integration,

account management, and post-launch support.

Klo's House of Fashion

Aug 2025 – Present

Developer

Remote

- Own frontend development and feature delivery for a live e-commerce platform; iterate based on ongoing client feedback.

Sidedish Foods

Jan 2025 – Present

Full Stack Developer

Remote

- Built and maintain a live ordering platform, resolving bugs and shipping features as requirements evolve.

Technical Skills

Mobile: React Native, Expo (App Router), TypeScript, mobile-first UI design, Expo Router navigation

Auth and Payments: Supabase (auth, RLS, real-time), Firebase (familiar), Stripe, MemberPress, session management

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), TailwindCSS, HTML5, CSS3

Backend and APIs: Node.js, Django, REST API design, PostgreSQL, MongoDB, third-party API integration

AI Workflow: Claude Code, Claude Sonnet/Opus (architecture and generation), GitHub Copilot (inline), ChatGPT (debugging), Gemini (research), Google AI Studio

Tools: Git, GitHub, Vercel, Render, Postman
